## Producer Price Indexes – September 2005

The Producer Price Index for Finished Goods rose 1.9 percent in September, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This advance followed increases of 0.6 percent in August and 1.0 percent in July. At the earlier stages of processing, prices received by manufacturers of intermediate goods climbed 2.5 percent in September, after moving up 0.7 percent in the preceding month, while the crude goods index rose 10.2 percent, following a 2.3-percent gain in August. (See table A.)

### Hurricanes Katrina and Rita

Hurricanes Katrina and Rita had virtually no impact on data collection efforts or survey response rates, and no changes in estimation procedures were necessary.

**Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted**

Month	Finished goods					Inter- mediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)		
2004							
Sept.	0.3	0.5	-0.2	0.3	3.3	0.3	-4.5
Oct.	1.5	1.5	5.7	.3	4.5	1.0	4.3

Sept.	1.9	1.4	7.1	.3	6.9	2.5	10.2

r=revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for May 2005 have been revised to reflect the availability of late reports and corrections by respondents.

Among finished goods in September, prices for energy goods advanced 7.1 percent, compared with a 3.7-percent increase in August. The finished consumer foods index turned up 1.4 percent, following a 0.3-percent decline in the prior month. Prices for finished goods other than foods and energy rose 0.3 percent in September, following no change in August.

During the third quarter of 2005, prices for finished goods advanced at a seasonally adjusted annual rate (SAAR) of 14.8 percent, after falling at a 0.5-percent SAAR during the second quarter of 2005. Excluding prices for foods and energy, the finished goods index increased at a 2.6-percent SAAR for the 3 months ended September 2005, after rising at a 1.0-percent SAAR for the 3 months ended June 2005. Among prices for raw and partially processed goods, the SAAR for intermediate goods accelerated from 0.8 percent to 18.1 percent from the second to the third quarter of 2005. The crude goods index moved up at a 109.7-percent SAAR during the third quarter, after declining at a 12.5-percent SAAR during the previous quarter. (See summary below.)

Before seasonal adjustment, the Producer Price Index for Finished Goods advanced 1.8 percent in September to 158.9 (1982=100). From September 2004 to September 2005, prices for finished goods rose 6.9 percent. Over the same period, the index for finished energy goods increased 27.8 percent, prices for finished goods other than foods and energy went up 2.6 percent, and the finished consumer foods index climbed 2.1 percent. For the 12 months ended September 2005, intermediate goods prices advanced 8.4 percent, and the crude goods index increased 28.5 percent.

**Summary of December-to-December, 9-month, and 3-month seasonally adjusted annual rates for selected stages of processing**

Grouping	Percentage change 12 months ended December			Seasonally adjusted annual rate for			
	2002	2003	2004	9 months ended September 2005	3 months ended March 2005	3 months ended June 2005	3 months ended September 2005
Finished goods	1.2	4.0	4.2	6.4	5.4	-0.5	14.8
Finished consumer foods	-6	7.7	3.1	.3	3.1	-5.5	3.4
Finished energy goods	12.3	11.4	13.4	28.6	17.4	.3	80.7
Finished goods less foods and energy	-5	1.0	2.3	2.3	3.4	1.0	2.6
Finished consumer goods, excluding foods and energy	-5	1.1	2.2	2.5	3.8	1.5	2.2
Capital equipment	-6	.8	2.4	2.1	2.5	.6	3.1
Intermediate materials, supplies, and components	3.2	3.9	9.2	8.7	7.8	.8	18.1
Intermediate foods and feeds	4.2	12.9	-2.3	1.7	5.9	0	-6
Intermediate energy goods	12.0	10.9	15.8	33.8	13.4	10.4	91.6
Intermediate materials less foods and energy	1.5	2.1	8.3	3.1	6.5	-1.3	4.2
Materials for nondurable manufacturing	4.2	4.9	13.7	7.6	9.0	-1.0	15.3
Materials for durable manufacturing	3.1	4.0	18.3	.9	8.8	-8.3	3.1
Materials and components for construction	.8	3.0	10.1	4.2	8.7	.5	3.7
Crude materials for further processing	24.7	19.5	17.4	25.1	6.6	-12.5	109.7
Foodstuffs and feedstuffs	4.5	24.1	-2.6	-4.0	15.0	-23.2	.3
Crude energy materials	61.5	14.4	35.9	59.8	15.3	1.0	250.3
Crude nonfood materials less energy	12.6	21.6	20.5	.6	-20.7	-22.8	66.3

NOTE: Late reports and corrections by respondents may cause some indexes to change 4 months after original publication. In addition, seasonally adjusted indexes may be revised for 5 years due to the recalculation of seasonal factors each January.

**Finished goods**

The index for finished energy goods moved up 7.1 percent in September, following a 3.7-percent advance in August. Leading this acceleration, prices for residential natural gas rose 9.0 percent, subsequent to a 2.5-percent gain in the previous month. The indexes for gasoline, liquefied petroleum gas, finished lubricants, and kerosene also climbed at faster rates than they had in August. Home heating oil prices turned up, after falling a month earlier. By contrast, the index for residential electric power was unchanged in September, following a 0.2-percent increase in the prior month. Prices for diesel fuel rose less than in the previous month. (See table 2.) During the third quarter of 2005, prices for finished energy goods rose at an 80.7-percent SAAR, after inching up at a 0.3-percent SAAR during the second quarter.

The index for finished consumer foods advanced 1.4 percent in September, following a 0.3-percent decline in August. Prices for eggs for fresh use surged 49.3 percent, after falling 24.0 percent a month earlier. The indexes for dairy products, beef and veal, and fresh fruits and melons also turned up, after decreasing in August. Prices for fresh and dry vegetables, soft drinks, and finfish and shellfish rose at faster rates in September than they had in the previous month. Alternatively, the index for processed fruits and vegetables declined 0.2 percent, after inching up 0.1 percent in August. Prices for confectionery end products and processed turkeys also moved down, following gains in the prior month. For the 3 months ended September 2005, the index for finished consumer foods increased at a 3.4-percent SAAR, after decreasing at a 5.5-percent SAAR for the 3 months ended in June.

**Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted**

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy (unadj.)	Except foods and energy	Change in crude goods from 12 months ago (unadj.)

r=revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for May 2005 have been revised to reflect the availability of late reports and corrections by respondents.

Prices for finished consumer goods other than foods and energy went up 0.2 percent in September, subsequent to a 0.1-percent decline in August. Leading this upturn, the passenger cars index rose 0.9 percent, following a 1.3-percent drop in the preceding month. Prices for alcoholic beverages, men's and boys' apparel, floor coverings, and periodical circulation also turned up in September, after falling a month earlier. The index for women's, girls', and infants' apparel increased more in September than it had in August, while prices for newspaper circulation advanced, after showing no change in the prior month. By contrast, the index for sanitary papers and health products decreased 0.3 percent in September, compared with a 0.7-percent gain in the prior month. Prices for soaps and synthetic detergents, which were unchanged in August, also declined in September. During the third quarter of 2005, the index for finished consumer goods other than foods and energy rose at a 2.2-percent SAAR, after climbing at a 1.5-percent SAAR during the second quarter.

Prices for capital equipment moved up 0.3 percent in September, after edging down 0.1 percent in August. Most of this upturn can be traced to the index for passenger cars, which rose in September following an August decline. The index for commercial furniture also advanced, after falling in August. Prices for communication and related equipment were unchanged in September, following decreases in the preceding month, while the civilian aircraft index moved up, after showing no change in August. Prices for heavy motor trucks and for transformers and power regulators increased at quicker rates in September than they had in the prior month. By contrast, the truck trailers index moved down, after rising in August. Prices for x-ray and electromedical equipment, as well as construction machinery and equipment, also turned down in September. The index for electronic computers declined at a faster rate than it had in August. For the 3 months ended September 2005, capital equipment prices climbed at a 3.1-percent SAAR, after advancing at a 0.6-percent SAAR for the 3 months ended in June.

### **Intermediate goods**

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 2.5 percent in September, following a 0.7-percent gain in the prior month. Accounting for about half of this acceleration, prices for intermediate energy goods rose more than they had in August. The index for materials for nondurable manufacturing also increased at a faster rate in September than it had in the preceding month. The index for materials for durable manufacturing turned up, after falling a month earlier, while prices for materials and components for construction moved up, following no change in August. By contrast, the index for intermediate foods and feeds decreased more in September than it had in the previous month. The index for intermediate goods excluding foods and energy rose 1.2 percent in September, compared with a 0.1-percent decline in the prior month. (See table B.)

The rate of increase in intermediate energy goods prices rose from 3.3 percent in August to 8.3 percent in September. The jet fuel index jumped 16.3 percent, following a 3.5-percent decline in the prior month. Prices for commercial electric power also turned up, after declining in August. The indexes for both industrial and commercial natural gas, gasoline, natural gas to electric utilities, and liquefied petroleum gas moved up at quicker rates in September than they had in the preceding month. Alternatively, price increases for diesel fuel slowed from 3.1 percent in August to 1.5 percent in September. The industrial electric power index also rose less than it had in the previous month. (See table 2.) Prices for intermediate energy goods advanced at a 91.6-percent SAAR in the third quarter of 2005, after climbing at a 10.4-percent SAAR in the prior quarter.

The index for materials for nondurable manufacturing rose 3.4 percent in September, compared with a 0.2-percent increase in the preceding month. Basic organic chemicals prices climbed 8.4 percent, following a 0.6-percent gain in August. The plastic resins and materials index turned up in September, and prices for paper advanced, after showing no change in August. The index for paperboard fell less than it had in the prior month. By contrast, prices for inedible fats and oils dropped 11.1 percent in September, following a 2.3-percent rise in the previous month. The indexes for woodpulp, paint materials, and synthetic fibers also turned down, after posting gains in August. For the 3 months ended in September 2005, prices for materials for nondurable manufacturing increased at a 15.3-percent SAAR, after falling at a 1.0-percent SAAR in the previous quarter.

The materials for durable manufacturing index climbed 2.6 percent in September, compared with a 0.8-percent decrease in the previous month. Leading this upturn, prices for steel mill products rose 3.7 percent, following a 2.7-percent decline in the prior month. The indexes for aluminum mill shapes, building paper and board, and plywood also turned up in September, while prices for titanium mill shapes increased more than they had in August. Alternatively, the prepared paint index fell 0.2 percent in September, after moving up 0.4 percent in the preceding month. Prices for unprocessed filament yarns and hardwood lumber also turned down, following gains in August. From June to September 2005, the index for materials for durable manufacturing increased at a 3.1-percent SAAR, after falling at an 8.3-percent SAAR in the second quarter of 2005.

Materials and components for construction prices rose 1.1 percent in September, after showing no change in the prior month. The plywood index jumped 14.4 percent, following a 3.0-percent drop in preceding month. Prices for steel mill products, softwood lumber, building paper and board, and plastic construction products also moved up in September, after falling in the prior month, while the paving mixtures and blocks index increased more than it had a month earlier. By contrast, price increases for asphalt felts and coatings slowed from 8.5 percent in August to 1.1 percent in September. The indexes for nonferrous wire and cable and for gypsum products also advanced less than they had in the previous month. During the third quarter of 2005, the materials and components for construction index went up at a 3.7-percent SAAR, after rising at a 0.5-percent SAAR in the second quarter.

Intermediate foods and feeds prices moved down 0.6 percent in September, following a 0.4-percent slide in the preceding month. The index for prepared animal feeds decreased 3.7 percent, after falling 1.6 percent in the prior month. Prices for fluid milk products; sausage, deli, and cooked meats; and dry milk products also turned down in September, following gains in the preceding month. The indexes for pork and for refined sugar and byproducts rose less than they had in August. Alternatively, beef and veal prices turned up 1.1 percent in September, compared with a 2.7-percent decline in the prior month. The indexes for natural, processed, and imitation cheese and flour also advanced, after falling in August, while prices for soft drink beverage bases increased, following no change in the previous month. The index for intermediate foods and feeds fell at a 0.6-percent SAAR during the third quarter of 2005, after showing no change in the preceding quarter.

### **Crude goods**

The Producer Price Index for Crude Materials for Further Processing advanced 10.2 percent in September, following a 2.3-percent increase in August. Prices for crude energy materials and for crude goods other than foods and energy also rose more in September than they had in the prior month. The index for crude foodstuffs and feedstuffs turned up, after falling a month earlier. (See table B.)

Prices for crude energy materials jumped 16.9 percent in September, following a 3.8-percent gain in the preceding month. Accounting for most of this acceleration, the natural gas index advanced 30.7 percent, after rising 4.6 percent in August. Coal prices turned up 0.7 percent, compared with a 0.8-percent decline in the previous month. Alternatively, the index for crude petroleum climbed 0.8 percent in September, after advancing 3.7 percent in the prior month. (See table 2.) After increasing at a 1.0-percent SAAR during the second quarter of 2005, the index for crude energy materials surged at a 250.3-percent SAAR from June to September.

Prices for crude foodstuffs and feedstuffs rose 1.5 percent in September, after falling 1.4 percent in the preceding month. The index for slaughter cattle increased 6.7 percent, following a 2.2-percent decline in August. Prices for fluid milk, wheat, and fresh fruits and melons also turned up, after decreasing in the previous month. The indexes for fresh and dry vegetables and for slaughter turkeys rose more in September than they had a month earlier. By contrast, prices for slaughter broilers and fryers dropped 4.0 percent in September, following a 4.7-percent advance in the prior month. The indexes for soybeans and corn fell more in September than they had in August, while prices for slaughter hogs increased at slower rates during the same period. The index for crude foodstuffs and feedstuffs edged up at a 0.3-percent SAAR for the three months ended in September 2005, after declining at a 23.2-percent SAAR in the preceding quarter.

Basic industrial material prices advanced 5.3 percent in September, following a 4.6-percent gain in the previous month. The index for iron and steel scrap increased 22.8 percent, after rising 19.7 percent in August. Prices for copper ores, raw cotton, and miscellaneous roundwood products turned up in September, following declines in the prior month. The hides and skins index fell less than it had in the preceding month. Conversely, copper base scrap prices edged up 0.2 percent in September, compared with a 5.1-percent advance a month earlier. The indexes for gold ores, aluminum base scrap, and for construction sand, gravel, and crushed stone also rose less in September than they had in August. During the third quarter of 2005, the index for crude nonfood materials less energy rose at a 66.3-percent SAAR, after falling at a 22.8-percent SAAR during the previous quarter.

### **Net output price indexes for mining, manufacturing, and services industries**

***Mining.*** The Producer Price Index for the Net Output of Total Mining Industries gained 14.9 percent in September, following a 3.6-percent rise in August. (Net output price indexes are not seasonally adjusted.) Most of this faster rate of increase can be attributed to prices received by the oil and gas extraction industry group, which surged 19.8 percent in September after increasing 4.8 percent in August. Prices received by the industry for oil and gas operations support activities also rose more in September than in the prior month. The industry indexes for copper ore and nickel ore mining, bituminous coal underground mining, and construction sand and gravel mining turned up, after falling a month earlier. By contrast, the industry index for oil and gas wells drilling advanced 1.0 percent in September, compared to a 4.3-percent increase in the prior month. Prices received by the industry for gold ore mining also rose less than they had in August. The industry indexes for crushed and broken granite mining and quarrying and for potash, soda, and borate mineral mining turned down in September. Prices received by the phosphate rock mining industry fell more than they had a month earlier. For the three months ended in September 2005, the Producer Price Index for the Net Output of Total Mining Industries advanced at an annualized rate of 198.6 percent, compared with a 0.5-percent rate of decrease in the preceding quarter. In September, the Producer Price Index for Total Mining Industries was 231.1 (December 1984=100), 54.5 percent above its year-ago level.

**Manufacturing.** The Producer Price Index for the Net Output of Total Manufacturing Industries advanced 1.6 percent in September, following a 0.5-percent gain in August. The majority of this acceleration was due to prices received by the petroleum and coal products manufacturing industry group, which climbed 12.2 percent in September after gaining 5.1 percent in August. The industry group indexes for wood product manufacturing, transportation equipment, primary metal manufacturing, and food manufacturing turned up, after declining in the prior month. Prices received by the industry groups for chemicals and for plastics and rubber products advanced more than they had in the previous month. Alternatively, the industry group index for computer and electronic products declined 0.2 percent, after edging down 0.1 percent in August. For the three months ended in September 2005, the Producer Price Index for the Net Output of Total Manufacturing Industries advanced at an annualized rate of 13.2 percent, compared with a 1.3-percent rate of increase in the prior quarter. In September, the Producer Price Index for Total Manufacturing Industries was 154.1 (December 1984=100), 6.9 percent above its year-ago level.

**Services.** Among services industries in September, prices received by the commercial banking industry increased 4.0 percent, after declining 0.6 percent in August. The industry indexes for cellular and other wireless carriers; hotels and motels (excluding casino hotels); and passenger car rental also turned up, after declining in the prior month. Prices received by the industry group for general medical and surgical hospitals gained more in September than a month earlier, and the index for savings institutions increased, following no change in August. Alternatively, prices received by the investment banking and securities dealing industry fell 7.2 percent, after advancing 2.6 percent in August. Prices received by lessors of nonresidential buildings (excluding miniwarehouses) rose less than they had in the preceding month. The industry index for scheduled passenger air transportation declined at a faster rate than it had in August. The industry indexes for employee leasing services and nonresidential property managers turned down, after rising in August. Prices received by direct property and casualty insurance carriers were unchanged, after rising a month earlier.

\*\*\*\*\*

Producer Price Index data for October 2005 are scheduled to be released on Tuesday, November 15, 2005, at 8:30 a.m. (EST).

## Technical Note

### Brief Explanation of Producer Prices Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

#### Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

#### Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

#### Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

## Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

<i>Title</i>	<i>Code</i>	<i>PPI Detailed Report Issue</i>
	<i>SIC</i>	
Wireless telecommunications	4812	July 1999
Telephone communications, except radio telephone	4813	July 1995
Television broadcasting	4833	July 2002
Grocery stores	5411	July 2000
Meat and fish (seafood) markets	5421	July 2000
Fruit and vegetable markets	5431	July 2000
Candy, nut, and confectionery stores	5441	July 2000

### Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

### Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at ([http://www.bls.gov/opub/hom/homch14\\_etc.htm](http://www.bls.gov/opub/hom/homch14_etc.htm)), and reprints are available on request.

### Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: Prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

*Index point change*

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

*Index percent change*

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

### Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from the BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*.

### Producer Price Index Data Via the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.

## Retrieving PPI data from the PPI Website

PPI data can be obtained from the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the “Get Detailed Statistics” header reveals the following 5 methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, nonJava-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

<b>Commodity code</b>	<b>Will provide data for:</b>
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpu063803	Pharmaceutical preparations, cardiovascular system
wpusop3000	Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix “pcu” followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the six-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as place holders for higher-level industry group codes.

<b>Industry-product code, Current NAICS series</b>	<b>Will provide data for:</b>
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) *In all cases, no spaces are permitted.*

<b>Industry-product code, Discontinued SIC series</b>	<b>Will provide data for:</b>
pdu28_#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

• **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

	Directory:
• NAICS Current Series	<b>/pub/time.series/pc</b>
• SIC Discontinued Series	<b>/pub/time.series/pd</b>
• Commodity Series	<b>/pub/time.series/wp</b>
• Special Requests	<b>/pub/special.requests/ppi</b>
• Latest News Release	<b>/pub/news.release/ppi.txt</b>

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (which appear in tables 4, 5, and 9 of the monthly PPI report and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files are also maintained within each of the five directories listed above.)

### **Other Sources of PPI Data**

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the “Get Detailed Statistics” link at the top of the homepage a chart appears listing all of the available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page including: Economic news releases, series report, and economy at a glance.

### **Additional information**

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or [ppi-info@bls.gov](mailto:ppi-info@bls.gov). Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.

Table 1. Producer price indexes and percent changes by stage of processing (1982=100)

Grouping	Relative importance	Unadjusted index				Unadjusted percent change to Sept.2005 from:		Seasonally adjusted percent change from:		
		Dec.	May	Aug.	Sept.	Sept.	Aug.	June to	July to	Aug. to

721	Accommodation .....	12/96	131.5	134.9	135.2	6.3	.2

1/ Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2/ The indexes for May 2005 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3/ Not available.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004.

Table 5. Producer price indexes by stage of processing, seasonally adjusted  
(1982=100)

Grouping	Index 1/					
	Apr. 2005	May 2005	June 2005	July 2005	Aug. 2005	Sep. 2005
Finished goods.....	154.4	153.7	153.5	155.1	156.0	158.9

Processed fuels and lubricants.....	142.5	138.1	139.9	147.1	151.9	164.2
Manufacturing industries.....	139.9	137.4	136.4	142.6	148.7	161.2
Nonmanufacturing industries.....	144.2	138.5	142.1	149.9	154.0	166.1
Containers.....	167.5	167.3	167.6	167.2	166.9	165.7
Supplies.....	151.0	151.3	151.7	152.1	152.2	152.4
Manufacturing industries.....	154.6	154.8	155.3	155.3	155.7	156.3
Nonmanufacturing industries.....	148.9	149.2	149.6	150.0	150.0	150.1
Feeds.....	106.3	107.9	110.8	114.2	112.3	107.3
Other supplies.....	154.1	154.3	154.4	154.6	154.8	155.4
Crude materials for further processing.....	174.7	169.3	164.7	175.8	179.9	198.2
Foodstuffs and feedstuffs.....	125.1	123.8	120.1	120.1	118.4	120.2
Nonfood materials.....	208.3	199.8	194.7	214.2	222.8	253.5
Nonfood materials except fuel 2/.....	169.5	165.6	166.1	179.0	186.3	191.8
Manufacturing 2/.....	156.6	152.9	153.4	165.6	172.3	177.6
Construction.....	201.4	201.4	198.5	199.0	199.3	198.3
Crude fuel 3/.....	252.4	237.1	222.7	251.5	261.4	332.8
Manufacturing industries.....	238.8	224.6	211.3	237.8	246.9	312.7
Nonmanufacturing industries.....	258.3	242.6	227.8	257.3	267.5	340.7
Special groupings						
Finished goods, excluding foods.....	153.7	152.8	153.1	155.1	156.4	159.4
Intermediate materials less foods and feeds.....	152.6	151.5	151.9	153.3	154.3	158.5
Intermediate foods and feeds.....	133.6	134.4	133.6	134.8	134.2	133.4
Crude materials less agricultural products 2/.....	213.6	204.7	199.6	219.9	229.0	261.0
Finished energy goods.....	126.9	122.7	124.8	130.3	135.1	144.7
Finished goods less energy.....	155.9	156.1	155.4	155.8	155.6	156.5
Finished consumer goods less energy.....	160.9	161.0	160.2	160.5	160.2	161.3
Finished goods less foods and energy.....	156.1	156.5	156.1	156.7	156.7	157.1
Finished consumer goods less foods and energy.....	164.0	164.4	164.1	164.7	164.6	165.0
Consumer nondurable goods less foods and energy..	186.1	186.8	187.0	187.3	187.4	187.8
Intermediate energy goods.....	140.8	137.1	139.4	146.6	151.5	164.0
Intermediate materials less energy.....	152.5	152.3	152.0	151.9	151.8	153.5
Intermediate materials less foods and energy.....	153.8	153.4	153.2	153.1	153.0	154.8
Crude energy materials 2/.....	212.6	203.1	200.2	225.8	234.3	273.9
Crude materials less energy.....	145.1	142.5	137.0	138.5	139.6	143.9
Crude nonfood materials less energy 3/.....	201.7	195.7	185.2	190.9	199.7	210.3

1/ All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for May 2005 have been recalculated to incorporate late reports and corrections by respondents.

2/ Includes crude petroleum.

3/ Excludes crude petroleum.
